

## What is the Coronavirus?

---

Coronavirus is a newly discovered disease that has made a lot of people poorly all over of the world. This is called a pandemic.

Symptoms are similar to the flu, like coughing, fever and being short of breath.

Most of the people who have caught the coronavirus have a mild case, meaning that it has not made them very ill.

Not many children have been diagnosed with coronavirus.

If someone is unwell or thinks that they may have the coronavirus, they can call 111 to get advice and help.

It is ok to have questions or feel worried about the coronavirus. Speak to a friend or person you trust about it!

You can stay healthy by washing your hands often, coughing into a tissue or your elbow and trying not to touch your face.
